

2 AUG 1963

SUBJECT: Camera Development for IDEALIST

1. If the ITEK camera proves to be successful, the possibility exists that this camera may be utilized in a U-2 modified for carrier landings.
2. It is assumed that original specifications, for the installation of the ITEK camera in the U-2 may not contain complete information as concerns additional "G" forces that may be exerted on the camera and/or film during a carrier landing.
3. While ITEK may not be told of the carrier modification, they should be advised of the problems they may have to face, particularly those which concern mounting brackets and optics.
